Dometic brisk air 2 installation instructions

Dometic brisk air 2 specs. Brisk air by dometic. Dometic brisk 2 manual. Dometic brisk air 2 installation.

The installation and operating manual for Dometic BRISK 2 can be accessed online in PDF format without requiring a login. The document spans 29 pages. To begin the setup process, remove any filter covers or filters from the AC cover by taking out the screws that hold it in place, being careful not to damage the cover. Then, set the cover aside for later reinstallation. Next, locate the four bolts securing the mounting bracket and carefully support it as you remove them. This will expose a large open area under the A/C called the plenum, which is divided into two compartments by a divider. Optionally, you can choose to remove the upper portion of the divider if needed. The vent adapters come turned 90 degrees for shipping purposes; however, they need to be adjusted upon installation. Hold the two vent adapters and press them toward the AC adapter while keeping the ducting collapsed. Turn the vent adapters in your desired direction. Now it's time to install the A/C Connect system by inserting its adapter into a square opening at the bottom of the Dometic Brisk II A/C, ensuring a snug fit with the lip of the adapter sitting flush against the metal base. Secure the A/C Connect using enclosed self-tapping screws. The next step involves attaching the two vent adapters to your system and sliding them behind the bolts securing your A/C to your roof through ventilation openings on either side of the plenum. If necessary, you can refer to instructions for adapting your system if the vent openings are too small or too large. Use HVAC foil tape to secure the vent adapters in place and prevent air leaks by taping around any excess opening around them. Once this is done, it's time to test your A/C by turning it on and feeling around the A/C Connect system for cold air leaks. If you find any leaks, simply use the foil tape to stop them. Once you have completed these steps, your system should be fully installed, and you can reattach your A/C cover as needed. filters and filter covers are now ready for use. Get ready to start enjoying your KoolRV.
